EDUCATION

University of California, Davis

Master of Science, Computer Science (GPA: 4.0/4.0)

Expected Mar 2027

- **Coursework:** Distributed Database Systems, Analysis of Software Artifacts, Software Engineering

Dayanand Sagar College of Engineering

Bachelor of Engineering, Computer Science (GPA: 3.97/4.0)

2020 - 2024

- **Coursework:** Data Structures and Algorithms, Operating Systems, Big Data, Cloud Computing, OOP

TECHNICAL SKILLS

- **Languages:** Java, C++, Python, SQL, JavaScript
- **Frameworks & Libraries:** Spring Boot, Flask, FAISS, LangChain, Sentence Transformers, Microservices, Elasticsearch, REST APIs, React, Node.js, Streamlit
- **Developer Tools:** Git, Docker, Kubernetes, Jenkins, GitHub Actions, Postman, Linux
- **Databases:** MySQL, PostgreSQL, MongoDB, Oracle
- **Cloud / DevOps:** AWS, EC2, Lambda, EBS, S3, CI/CD Pipelines

EXPERIENCE

Perfios Software Solutions Pvt Ltd | *Software Development Engineer*

Apr 2024 - Sep 2025

- Redesigned **RESTful** microservices in Java and Spring Boot, optimizing database queries and CI/CD pipelines to achieve a **20%** reduction in API response times across 5+ production services.
- Launched a full-stack invoicing platform using Node.js with role-based access control (**RBAC**), enabling 500+ clients to automate reporting workflows and cutting manual data-entry time by 30%.
- Engineered an **OCR**-based bank identification system for 10+ international banks, boosting first-attempt recognition accuracy by **35%** and eliminating manual fallback processing for 90% of submissions.
- Containerized 8+ **microservices** using Docker and built CI/CD pipelines via GitHub Actions and Jenkins, cutting release cycle time by 25% and reducing deployment failures by 40%.

Brane Enterprises Pvt. Ltd | *Automation Intern*

Jun 2022 - Jan 2023

- Automated 20+ **API test** workflows using Postman, integrating them into the CI/CD pipeline and reducing manual QA effort by 15% while increasing test coverage by 25%.
- Refactored 3 client-facing automation modules in Node.js following **Agile sprint cycles**, leveraging Git for version control and improving average task execution speed by 20%.

PROJECTS

Community Food Delivery Platform - LocalBite | [Code](#)

Feb 2026 - Present

- Architected a distributed, microservices-based food delivery platform using Python, Flask, and Node.js on Docker and Kubernetes, targeting 10,000–15,000 Davis residents and reducing restaurant commissions from **15–30% to 8–12%**.
- Developed a two-phase dispatch engine using **Redis** queues and WebSockets, prioritizing a student delivery pool and cutting average dispatch time by **15%** for student orders.
- Built a payment settlement service with Stripe integration, handling split payouts across restaurants, delivery agents, and platform - supporting full refund and cancellation workflows.

Agentic RAG Document QA System | [Code](#)

Dec 2025 - Present

- Implemented a conversational RAG agent from scratch — **FAISS vector search**, sentence-aware chunking, SentenceTransformer embeddings, and sliding-window conversation memory — with similarity thresholding to prevent hallucinations and real-time FAISS index updates on document upload.
- Constructed multi-mode answer generation (descriptive, MCQ, True/False) with per-mode prompt guardrails ensuring responses are grounded strictly in retrieved context, with source document citations and similarity scores surfaced in the UI — directly applicable to compliance-sensitive, document-heavy domains.

Secure Healthcare Portal | [Code](#)

Nov 2023 - Mar 2024

- Developed a full-stack Node.js healthcare file-sharing portal with SHA-256 cryptographic integrity verification on every file access — flagging tampering in real time — alongside bcrypt authentication, MongoDB GridFS storage, session management, and automated Nodemailer alerts across **500+** test transactions.
